Training
(description)
Functional Attributes
Functional attributes include:
– Training ID
– Subject
– Mode of Study
– Area
– Participant's Level
– Trainer
and all other attributes that are applied when compiling descriptions of users and/or other system objects (permanent system directories)
Creation
(only using previously created attributes). Exception: creating a training ID and corresponding tags
Application
(only attributes related to users, including to the selection of such users)
Usage
(the applied attributes are subsequently used by the system to create connections and reports)
Information Attributes
Information attributes include:
– Name of the training (in the arbitrary form)
– Descriptions (in the arbitrary form)
– Notes (in the arbitrary form)
– Moderator
and all other attributes that are used in an arbitrary form (they are not system directories and will not become such in the future)
